PROFILE

A backend developer builds and maintains the server-side components of a web application, focusing on the technology that users cannot see. Their work involves managing databases, servers, and application programming interfaces (APIs) to ensure the application functions correctly, handles data securely, and performs efficiently.

WORK EXPERIENCE

patel web solution : In 2024 we can create one website in team work and my role is the graphs and drawing , formatting , SRS report we can created also etc .

Event Management : Last One Year I am freelancing in side working and my profession is promoter and wedding based , Production salesmen
